CRITICAL ATTENTION

Factory Forensic Health Report

SECTION 1: THE FINANCIAL BLEED

You've got money flowing out that you're not even tracking. Let's shine a light on it.

- **Dead Capital Analysis:** Your current inventory sits at ₹50 Lakhs against an estimated annual turnover of ₹1 Crore. A healthy inventory level for your business model should be closer to 15% of turnover, or ₹15 Lakhs. This means you have approx **₹3,500,000** trapped in excess inventory. At 12% OD interest, you are losing **₹35,000/month** just holding this. That's money you could be investing, not losing.

- **Operational Waste:** You are spending money on manual data entry work that should be instant. Every manual invoice costs you ₹60, not to mention the hidden costs of time, delays, and potential errors from manual typing. This is a recurring, unnecessary drain on your profits.

SECTION 2: CRITICAL RISK DIAGNOSIS

These aren't just minor issues; they are fundamental flaws that threaten your business continuity and profitability.

- **The "Bus Factor":** Your reliance on a single store manager who "knows where everything is kept" is a disaster waiting to happen. Your business is not an asset; it is a job. If your manager leaves, your operations will grind to a halt. This is an unacceptable level of risk.

SECTION 3: THE F3 BLUEPRINT

It's time to stop the bleeding and build a resilient, profitable operation. Here's your immediate action plan:

To achieve your dream fix of knowing your stock levels on your phone, you need to implement the **Cloud Inventory Module**. This will give you real-time visibility, reduce dead capital, and eliminate your dependency on manual tracking and individual knowledge.
